Submitted on 2 Feb 2018

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

On multi-exit routings and AS relationships

Riad Mazloun, Marc-Olivier Buob¹, Jordan Augé¹, Bruno Baynat¹, Timur Friedman¹ and Dario Rossi²

Internet routing example

Internet routing example

Surprising observations

BGP route with higher LP

A route has a higher LP

Single next-hop AS

Multi next-hop ASes

Equal LP for all next-hop ASes

Observed ME \implies equal LP for next-hop ASes

Observed ME \implies equal LP (ME)

$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$

Implementation of AS economical policies

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

client > peer > provider

Implementation of AS economical policies

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

$$\begin{aligned} client > peer > provider &\implies \\ LP(client) > LP(peer) > LP(provider) \end{aligned}$$

(ME) + (POLICY)

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

$$client > peer > provider \implies \\ LP(client) > LP(peer) > LP(provider)$$

(ME) + (POLICY)

$ME(AS_1, p) = \{AS_2, AS_3\} \implies$ same type of relationship between AS_1 and AS_2, AS_3

Does it work?

(ME) + (POLICY)

$ME(AS_1, p) = \{AS_2, AS_3\} \implies$ same type of relationship between AS_1 and AS_2, AS_3

Does it work?

(ME) + (POLICY)

$ME(AS_1, p) = \{AS_2, AS_3\} \implies$ same type of relationship between AS_1 and AS_2, AS_3

Check with CAIDA's inference dataset

- Get types of relations of cases such between AS_1 and AS_2, AS_3 from CAIDA's inference dataset
- Check whether all of the next-hop ASes have the same relationship

Does it work?

(ME) + (POLICY)

$ME(AS_1, p) = \{AS_2, AS_3\} \implies$ same type of relationship between AS_1 and AS_2, AS_3

Check with CAIDA's inference dataset

- Get types of relations of cases such between AS_1 and AS_2, AS_3 from CAIDA's inference dataset
- Check whether all of the next-hop ASes have the same relationship
- About 70% matching 30% mismatching

Multi-exit occurrences and relationship matching

Data

Multi-exit discovery:

- BGP: BGPmon, Colorado State University project¹

Discussion

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

$$\begin{aligned} client > peer > provider &\implies \\ LP(client) > LP(peer) > LP(provider) \end{aligned}$$

Check with CAIDA's inference dataset

- Get types of relations of cases such between AS_1 and AS_2, AS_3 from CAIDA's inference dataset
- Check whether all of the next-hop ASes have the same relationship

Discussion

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

$$\begin{aligned} client > peer > provider &\implies \\ LP(client) > LP(peer) > LP(provider) \end{aligned}$$

Check with CAIDA's inference dataset

- Get types of relations of cases such between AS_1 and AS_2, AS_3 from CAIDA's inference dataset
- Check whether all of the next-hop ASes have the same relationship

Discussion

Observed ME \implies equal LP (ME)

$$ME(AS_1, p) = \{AS_2, AS_3\} \implies LP_{AS_1}(AS_2) = LP_{AS_1}(AS_3)$$

Implementation of AS economical policies (POLICY)

$$\begin{aligned} client > peer > provider &\implies \\ LP(client) > LP(peer) > LP(provider) \end{aligned}$$

Check with CAIDA's inference dataset

- Get types of relations of cases such between AS_1 and AS_2, AS_3 from CAIDA's inference dataset
- Check whether all of the next-hop ASes have the same relationship

Have another ideas?

- Feedback about the problem and the analysis process
- Get confirmation about the results (we don't have a ground truth of AS relationships)
- Possible collaborations

Reserved slides...

BGP and IP overlap

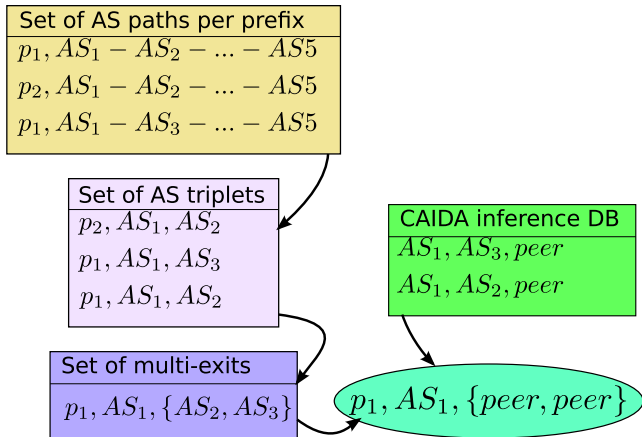

Multi-exit routing, BGP and IP results

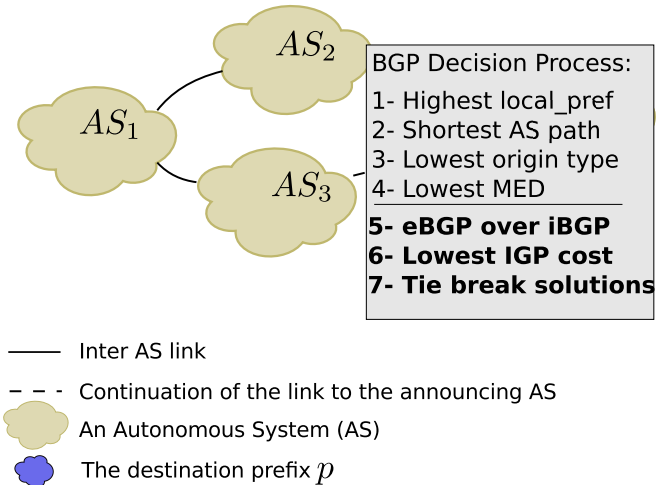

TopHat interconnection

- Inter AS link
- - - Continuation of the link to the announcing AS
-  An Autonomous System (AS)
-  IP Hop $@_i$
-  The destination IP address $@_d$
